Seller's description

Times being what they are, I'm offering up my 1991 Fender Vibroverb Reissue. The deep reverb and the bias modulated vibrato are well known as being some of the best available today. This amp is in A++ condition - no holes or tears in the tolex or grill cloth, (there is something in the photo like looks like a blemish in the grillcloth. Turned out to be something organic that I brushed off) everything is in perfect working order, and sounds better than new!

I have performed the following upgrades - replaced the stock Utahs with a fresh set of Jensen C10Qs, generally agreed upon to be the perfect speaker for this amp. I installed a 25k bias trim pot and a pair of 1ohm resistors to make it easy to bias the right voltage to the tubes, I removed the bright cap on the bright channel, and installed a set of Svetlana "winged C" 6L6 GCs - IMO the best new 6L6 available. The finished product is a terrific sounding amp that honks with authority when cranked, and looks awesome! Trust me - this amp is the ****! I have completely enjoyed owning this amp - it's my second one - I would get another without hesitation.

Includes brown Fender cover

Someone grab this one before I come to my senses!
