

Due to customer suggestions we have added additional windings and a tap to our "200" series primaries. This will affect all production after August 2009.

CHOICE #1

For those customers who need the **115V input** - nothing has changed - simply use the White & Gray wires and tape the Black wire (see above schematic).

CHOICE #2

For those customers who are seeing too high a secondary voltage due to higher primary line voltages (roughly **125V input**) - use the White & Black wire and tape the gray wire (see above schematic).
