

$B+ = 350V$ ,  $R_a = 100k$ ,  $R_k = 1k5$ ,  $R_l = 330k$   
 Grid swing (from bias point)  $+1.75V$  to  $-2.25V$

Same as above with  $B+ = 250V$   
 Grid swing (from bias point)  $+1.25V$  to  $-2.25V$  (goes into grid current limiting sooner)
