

All Transistors are BC547 except the BC557 you see
Image of transistor is wrong, for correct pin connection refer to the schematic
Output A = Cut - Output B = Boost.
Pot pin 1 = Boost - pin 2 = to be connected near capacitors - pin 3 = Cut
Pots are slider 50k Linear
Near the 22k resistor in the top left there are the connections for the power supply
In the upper side of the relays there are the relays coil connections
47p capacitors are ceramic - 10uF is elecrtrolytic, negative to ground - 2 capacitors are Wima MKP10 other capacitors are Wima MKS2 (5mm)
