

NOTES:

Output power with 375V Va will be about 30W into a 5Ka-a load.
 Preamp out / Power in jacks may be omitted.
 70V tap no used on Hammond 1645A OT.
 Tune R14 as this is 30W amp, R14 will need to be adjusted to compensate.
 C20 and C21 is a pair of 50uF/50uF dual section cans, each can strapped in parallel.
 C6 and C13 is a single 50uF/50uF dual section can.
 A JCM 800 50W project chassis would be a good fit for this circuit.
